# Description

**About the project:**
I have worked as Blockchain Haskell developer on
new blockchain generation project. The framework part of the project is
open-sourced https://github.com/Enecuum/Node and it has decent
documentation and explanations about architecture and possibilities:

**About used stack:**
**haskell:**
Free monads (eDSLs)
STM (Software Transactional Memory)

**common:**

-   DevOps: rancher, docker
-   Metrics: Grafana+Graphite+StatsD
-   Project tracking: Redmine
-   Knowledge database: Confluence
```

```
**About tasks:**
Research and development in such fields as

-  blockchain related:
-- blockchain consensus algorithms (PoW, PoS, PoA)
-- p2p network, routing -- tests (integrational, functional)
-- smart-contracts, petri-nets, pi-calculus
-  common application dev related:
-- config management
-- cli
-- logging
-- Packages, dependency management via stack.
-- parallel computations and processes
